

XANALYS Link Explorer – It's easier to find the missing link when you miss absolutely nothing.

At a Glance

- Infinite possibilities, finite answers:** With XANALYS Link Explorer, you can analyze even the largest databases and transform raw data into meaningful, connected intelligence — definitive answers — right before your eyes.
- Specific answers in record time:** Expand or narrow your questions to target the specific answers you're looking for. Charts are automatically updated as new discoveries unfold.
- Explore all possibilities, create compelling presentations:** In complex cases, use XANALYS Link Explorer to map potential scenarios — and to create clear, thorough presentations that simplify the case for your team or to present a complex web of evidence to the courts.

You know that single piece of damaging evidence is out there. But how can you possibly find it when there's so much data to contend with? The answer is XANALYS Link Explorer, a powerful analysis and visualization software solution that enables you to quickly uncover connections and associations critical to your investigation that you may have otherwise missed. XANALYS Link Explorer gives law enforcement, homeland security, anti-terrorism and private-sector investigators the power to find the missing link.

DISCOVER CRITICAL RELATIONSHIPS THAT CAN LEAD TO CONVINCING CONCLUSIONS

To begin, simply ask a question by dragging and dropping icons onto a query screen. XANALYS Link Explorer then generates easy-to-read interactive charts that map how people, events, telephone calls, email messages and other case details are linked. You'll immediately see underlying patterns that may have been lost due to the sheer quantity and unwieldiness of the data. And as new information arrives, the displays are instantly updated.

SEARCH FOR SPECIFIC INFORMATION

When asking a question, you can apply conditions so that only certain objects or links with defined characteristics are retrieved.

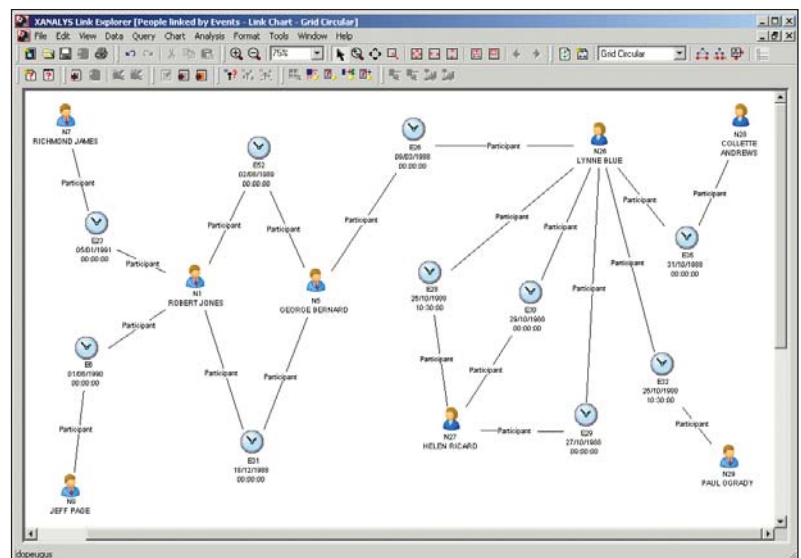

VIEW INFORMATION IN A VARIETY OF WAYS

In addition to powerful link analysis charts, XANALYS Link Explorer can display results in numerous other formats, including a report, a timeline with events organized in chronological order or a hierarchy chart showing relationships between

people. Multiple views can be on screen at once. And when you make a change in one view, that change is automatically made to the other views.

ACQUIRE, MERGE AND MODIFY INFORMATION FROM MULTIPLE SOURCES

XANALYS Link Explorer offers several methods that allow you to import, enter, merge or modify data, as well as to create new objects and links. These include a text importer, flexible data importer, data entry forms, QuickChart toolbox and object cards.

XANALYS Link Explorer's powerful link analysis capability rapidly reveals the links between people and events.

XANALYS investigative software solutions:

- XANALYS PowerCase[®]
- XANALYS Link Explorer
- XANALYS Indexer

XANALYS Link Explorer's Flexible Data Importer (FDI) allows data to be imported from external sources into a Link Explorer database, interpreting the data as objects and links. The FDI uses a header file that describes the form of the import data and how it is to be interpreted.

This enables, for example, information from telephone call logs, or bank account transactions, in CSV format, to be imported into the Link Explorer database.

XANALYS Link Explorer provides a wizard to enable the construction of a header file. Advanced users can flexibly modify the generated definition enabling the import of data from complex file formats.

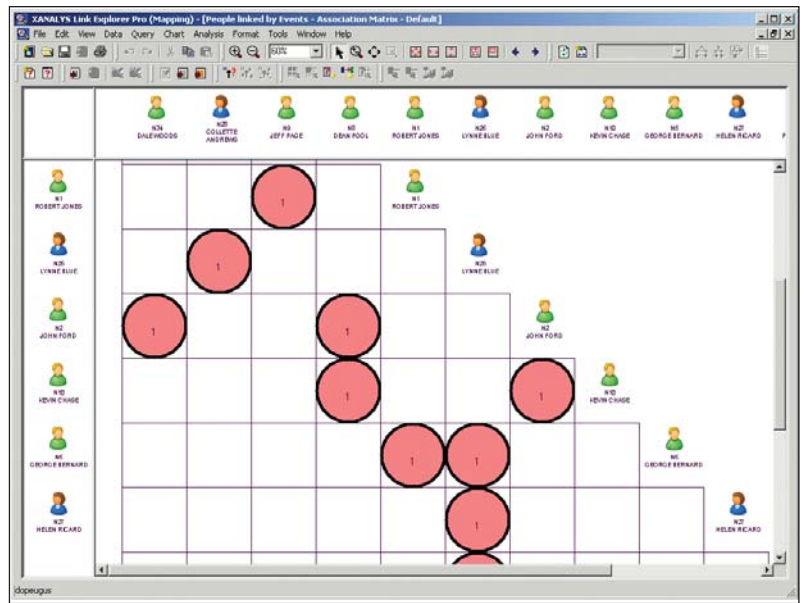

MODEL THE DATABASE TO YOUR NEEDS

XANALYS Link Designer provides advanced data modeling capabilities to model information from source systems to

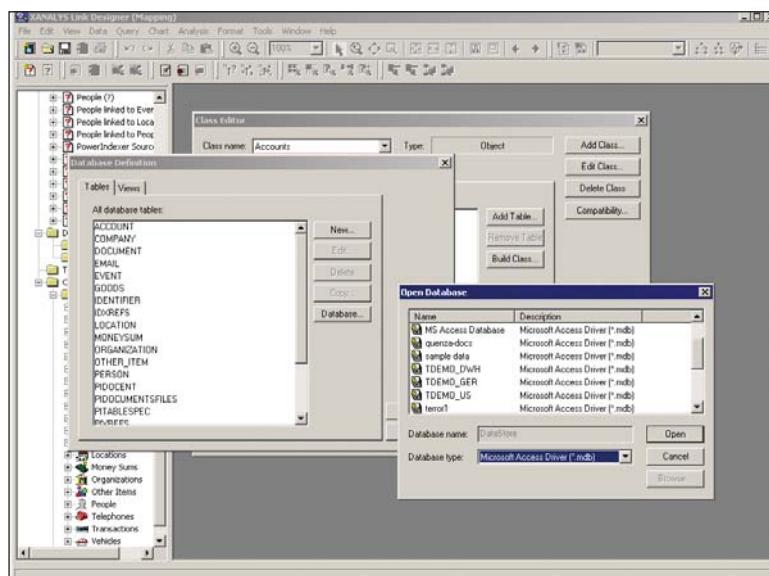

create a XANALYS Link Explorer template. By seamlessly connecting to an existing ODBC database, XANALYS Link Designer makes it exceptionally easy to retrieve table structures and definitions from disparate sources and define how you want the retrieved information displayed and stored.

MAP THE INFORMATION

XANALYS Link Explorer can also be seamlessly integrated with the mapping software of your choice such as MapInfo[®], ArcView[®] or blue8world[®], allowing you to analyze geographic links and perform special analysis. Plus you can move seamlessly between both applications, giving you the ability to simultaneously look at other key relationships.

XANALYS Link Explorer shows the links between people associated with a common event and visually reveals the inconsistencies in statements made by individuals.

XANALYS Link Designer templates mask the complexity of the underlying data sources, allowing users to take advantage of the content through simple but powerful queries.
